Project East Anglia 1

Scope Provision of 10Te deck tensioner to retrieve scrap cables

1. Project Overview

Boskalis was awarded the retrieval of cables for the East Anglia 1 project. Blue Offshore provided to Boskalis a 10Te deck tensioner and control cabin for the retrieval of various cables. The diameter of the cables to be retrieved are varying from 43mm to 50mm. To be able to handle these cable diameters, Blue Offshore provided a tailor-made solution by modifying the tensioner's trackpads. Blue Offshore's tensioner was mobilised onto vessel Olympic Delta. The activities took place in Q1 of 2019.
